

IEEE Valencia College Hosts Industry Leaders for Engineering Week

The IEEE Valencia College Student Chapter, in collaboration with the Florida Engineering Society (FES), proudly hosted an exciting Engineering Week at Valencia College's West Campus. This year's event featured guest speakers from AdkinReals, Siemens Energy, and Universal Creative, offering students valuable insights into real-world engineering applications and career pathways within their respective industries.

Throughout the week, attendees engaged in technical talks and networking opportunities, gaining firsthand knowledge from industry leaders in civil engineering—building our cities, entertainment engineering—creating experiences behind one of Florida's greatest theme parks, and renewable energy—powering it all. The event highlighted the importance of interdisciplinary collaboration and provided students with a glimpse into cutting-edge advancements shaping the future of engineering.

The IEEE Student Chapter within Valencia College remains committed to continuing to foster the connection between students and industry, empowering future engineers through education, professional development, and community engagement. A special thank you to our speakers, attendees, and organizers for making this year's Engineering Week a resounding success!
